

# Which Training Package?

We understand how difficult it is to calculate how much training your staff may require in order to achieve your goals. In order to help you identify your requirements we have created the following diagram which is based on our experience of supporting over 700 schools in embracing technology solutions and embedding them with new method of working.

## VISION & PLANNING SESSION

To ensure your project is successful it is essential to have a clear vision of what you are trying to achieve. When planning the delivery you should identify a success criteria, a realistic timescale and achievable outcomes for each stage of the project.

**Outcome: A delivery plan including success criteria and timescales agreed by all key stakeholders.**

## INSTITUTIONAL KNOWLEDGE

All personnel expected to utilise the new solution (including non-teaching staff) attend introductory training to ensure they understand the solution and can operate it at a basic level.

**Outcome: A basic understanding and ability to utilise the new solution amongst all staff.**

## STAFF DEVELOPMENT

Staff attend training specific to their department needs (including admin and leadership). Workshops are delivered to smaller groups or on a one-to-one basis to ensure staff receive the right level of support. A blended training programme can be delivered and staff progress can be monitored.

**Outcome: Wider teaching staff developing the ability and confidence to embed the new solution into their practice.**

## SUSTAINABLE TRANSFORMATION

When you are confident that staff have made sufficient progress, you should continue to encourage and monitor the use of the solutions you have worked hard to embed across your institution. You should also continue to evaluate the impact of your strategy in order to identify any additional support the institution may require before problems arise.

Consider how you can continue to invest in ongoing professional development resources such as the Tablet Academy Online Training Platform or further training programmes which reward staff for their efforts with academic credits such as the Lamar University 'Certificate in Technology Enhanced Teaching' programme.
